👤 Profile

Full-stack software engineer with 3+ years of experience building cloud-based fintech applications using Python, .NET, and modern front-end frameworks. Experienced in designing RESTful APIs, scalable data models, event-driven background services, and CI/CD pipelines on AWS. Strong background in system reliability, automated testing, and distributed systems. Passionate about building secure, high-performance financial platforms and delivering clean, maintainable production code.

📁 Professional Experience

BlackRock – Associate, Application Engineer II / 4.2026. – Now

Building and maintaining a microservice-based platform with multiple frontend and backend services serving business-critical data to users.

- Developed backend microservices integrating MongoDB, PostgreSQL, and Snowflake to aggregate and serve large financial datasets
- Implemented business-driven aggregation, filtering, and data transformation logic to meet product specifications
- Built and maintained frontend services to present processed data through interactive user interfaces
- Collaborated across teams in a distributed microservice architecture to deliver scalable, reliable features

Tech stack: MongoDB, PostgreSQL, Snowflake, Microservices, REST APIs

Between doo – Full-Stack Software Engineer / 1.2025. – 4.2026.

Working on multiple fintech platforms focused on invoice financing and financial risk processing.

- Designed and developed RESTful APIs in .NET for financial workflows including invoice processing, exposure tracking, and client management
- Built Angular front-end components for financial dashboards, approval flows, and reporting interfaces
- Designed MySQL and PostgreSQL data models and optimized complex SQL queries for large financial datasets
- Implemented background workers and scheduled processes for automated data synchronization and processing
- Developed event-driven features to improve system scalability and decouple services
- Containerized services using Docker and integrated automated builds and deployments via CI/CD pipelines
- Collaborated with product and QA teams in Agile environment to deliver production features end-to-end

Tech stack: .NET, Angular, MySQL, Docker, Cloud, CI/CD

TeleSign – Associate Software Development Engineer in Test / 11.2022. – 1.2025

Worked on cloud-based communication platform with focus on system reliability, bug fixing, automation, and backend validation.

-
- Developed Python-based integration and functional tests for AWS microservices and REST APIs
 - Built automated regression frameworks improving release confidence and reducing manual testing effort
 - Designed test data generators and database validation scripts using Python and SQL
 - Contributed to end-to-end testing infrastructure for distributed cloud services
 - Troubleshoot production issues and worked on solving existing problems and improve system stability

Tech stack: Python, AWS, SQL, CI/CD

🧠 Skills

Programming languages, Technologies and Databases

- **Languages & Frameworks:** Python, C#, .NET, JavaScript, TypeScript, Angular, React, Node.js, C, Java
- **Backend & Architecture:** REST APIs, Microservices, Background Services, Event-driven processing, Data modeling
- **Databases:** MySQL, MSSQL, PostgreSQL, MongoDB, Snowflake
- **Cloud & DevOps:** AWS, Docker, CI/CD (Bitbucket Pipelines), Git
- **Other:** SQL optimization, Test automation, E2E testing, Agile/Scrum

🎓 Education

University of Novi Sad, Faculty of Science

- Bachelor's degree in Information Technologies.
- Master's degree in Information Technologies (*In progress*).

★ Projects

SEF Data Analyzer | 08.2025. – 02.2026.

A .Net backend service that pulls data from SEF into the local database, aggregates it and analyzes it to predict business opportunities or risks. Once a prediction has been made it sends a slack notification or an email to operations for further action. This is done for FinSpot as a side project.

Personal Page v2 | 4.2025. – Now

Second iteration of my personal page that serves as a way to practice my frontend designed skills and as a personal portfolio.

<https://github.com/wesely1996/PersonalPage>

Wedding Invitations | 02.2024. – 06.2025.

Wedding invitation webpages with an integrated google forms for guest attendance confirmation.

<https://github.com/wesely1996/bilojevrema>

Mapping Netflix Movie Data | 05.2021. – 06.2021.

This application uses Neural Networks and Topological Mapping technologies to recommend Netflix movies to users based on the ratings of movies they and others watched. The project was done by a two-man team in Python.
